## AFRICAN INFORMATION MOVEMENT (AIM.)

### ANNUAL REPORT OF ACTIVITIES

2020

## ICT Training

During our first executive meeting early January, 2020 at Elmina, we all were tasked to involve all schools in komenda into the ICT project which wasn't an easy task though but because our overall aim is to provide educational services, especially to support young people in rural areas.

By doing so, we had several meetings with almost all school head teachers in komenda on how best we can achieve the above aim, since we are not supposed to teach the same students during school hours.

Fortunate for us, we were able to organize some ICT classes within January, February and March, 2020.

There were a lot of challenges from the beginning with the total number of students per class as comparing to the number of computers at the training centre so we had to group the students per our computers.

It wasn't easy with the teaching because we had to repeat the same topic for five to six times just for only class, so can imagine having two or three class in a day. Things became very tough after March, 2020 where there was a total lock down because of COVID19 Pandemic.

After some months, we were able to organize other classes with different schools, where students were given nose masks, liquid soaps and running water for hand wash and others just to follow the protocols given by the Ghana Government.

The students were given the opportunity to explore the computer user interface, learn professional handling of application software like Microsoft Office and how to move responsibly and targeted in the web.

## **ASSOCIATION OF NGOs IN KEEA AND COVID 19 EDUCATION.**

AIM played active part in educating the public on the need to wear nose mask and follow the Covid 19 protocols as enunciated by the state. This was a major voluntary work that we embarked.

## **NABCO ISSUES**

So far, we have only one NABCO personnel at AIM centre. Two of the trainees left and one person also died. We look forward to have some NABCO trainees to add up. This will be based on the needs of the organisation.

## SOLAR WORKSHOP

In January 2020, we tried so many times to bring the students to the training centre for the workshop but we couldn't achieve it due to the distance from their school to the training centre.

In fact we had no choice than to continue from where we ended in December 2019 where all the time we had to go there (Komenstech) by transport with our solar materials to offer training to the interested electrical students from Komenstech.

The workshop automatically ended after the total lockdown so we quickly had to develop another strategy for the project. There comes this Veronica bucket project, where some young people were teaching how to locally produce veronica bucket themselves. After which the same people were also introduce to solar energy.

## RENEWAL N.G.O AND COMPANIES REGISTRATION

So far, we have not able renew our NGO certificate and re-registration of NGO at the Registrars General for the past two years. This means that we need to start the process this month. This time round I propose that David and Francis should be tasked to initiate the process to the end. This will give them the experience to hold forth in event that I stop AIM because of change of job.
